

OneWater Advocates

Advocating for the alignment of urban water policy with credible science and technical capability.

Sustainable use of water resources requires political, technical and social consensus. There is now scientific and technical capacity to enable us to use any source of water and treat it for any end use. To help increase diversity of supply and provide Australians with a more resilient urban water and economic future, OneWater Advocates formed in 2018. OneWater Advocates is an independent body of highly-regarded industry professionals. Funded solely by its members, OneWater Advocates has representation from NSW, Queensland, Victoria, South Australia and Western Australia.

Our **Mission** is to encourage a positive and unified national consensus for innovative management of water.

Our **Purpose** is to promote open discussion and action in applying OneWater Thinking for developing healthy, safe and reliable water solutions for regional and metropolitan communities, industry and agriculture.

OneWater Thinking

Solving every water challenge involves evaluation of:

- All water sources
- All end uses
- Solutions that are fit for purpose
- Outcomes that are fit for a community's needs
